1 DEMAND & CONTEXT

ELEMENT 1

Problem

What is wrong today, in business language. What is happening? Where is the friction? Who is affected? Where do delays appear?

Test: stakeholders should recognise their own world. Two to four paragraphs.

ELEMENT 2

Desired Outcome

What success looks like. What will be different operationally? What improvement is expected? How will it be measured?

Convert every aspiration to a measurable target. "Faster" becomes "under 10 minutes."

2 PROBLEM FRAMING

ELEMENT 3

Scope Boundaries

In Scope
Named channels, segments, systems

Out of Scope
Explicit exclusions stakeholders may have assumed

Constraints
Fixed elements (deadlines, budget, platform decisions)

Assumptions
Stated explicitly so they can be tested

ELEMENT 4

Stakeholders

Decision Makers
Authority to fund, scope, or stop

Business Owners
Own the operational outcome

Key Users
Use the new capability daily

Delivery Enablers
Technical, compliance, supporting teams

Named, not generic.

3 SOLUTION DIRECTION

ELEMENT 5

Early View of the Solution

Direction of travel. Not a design. A plausible shape that aligns thinking without committing to implementation.

Acceptable forms:

- Rough process flow
- Workflow diagram
- High-level system view
- Dashboard or screen concept

A paragraph of prose plus a single diagram or sketch.

[Diagram or sketch here]

Test: stakeholders say "yes, that's the kind of thing we mean."

If "no, we were thinking of something different" — return to Element 1.

4 MEASURES OF SUCCESS

ELEMENT 6

Measures of Success

How the initiative will be judged. Five to seven measures. Mix of leading and lagging.

Per measure:

- Metric — what is measured
- Baseline — current value
- Target — post-delivery value
- Timing — when measured
- Owner — accountable role
- Type — leading or lagging

Leading measures
Early indicators (e.g. adoption at 30 days)

Lagging measures
Delayed indicators (e.g. cost per unit at 12 months)

Without explicit measures, initiatives declare success without evidence.

1 DEMAND & CONTEXT

PROBLEM

New retail account onboarding takes 4–7 business days. Paper forms, manual data entry, batch overnight KYC review.

Customer drop-off at three points: 22% after paper forms (no acknowledgement); 18% during verification (document burden); ~5% at funding (account invisible in app).

Branch staff: 35–40% of customer time on data entry, not advice.

DESIRED OUTCOME

Eligible accounts complete in **under 10 minutes** on web or mobile. Secure eKYC, automated identity verification, real-time decisioning.

Total drop-off: 40% → **under 8%.**
Branch data-entry: 35% → **under 10%.**
Compliance backlog eliminated; 95% of reviews within 30 minutes.

Compliance posture preserved.

2 PROBLEM FRAMING

SCOPE BOUNDARIES

In Scope
Digital onboarding · Individuals + SME · web + mobile · core banking, KYC vendor, CRM · KYC/AML and PCI-DSS compliance

Out of Scope
Wealth management onboarding · loan origination · post-onboarding servicing · international branches · core platform replacement

Constraints
AML rules deadline end FY26 · $1.5M budget envelope · existing core banking platform retained

Assumptions
KYC vendor APIs stable · ID verification SLAs hold · CRM absorbs new data model

STAKEHOLDERS

Decision Makers
Jane Smith — Head of Retail Banking
Sarah Lee — Head of Risk & Compliance

Business Owners
Mark Johnson — Customer Operations
Priya Patel — Head of Finance

Key Users
Branch staff · Relationship managers · Customers (prospect)

Delivery Enablers
CIO · KYC vendor · Identity provider · Compliance team · Core banking team

Engagement schedule attached.

3 SOLUTION DIRECTION

EARLY VIEW OF THE SOLUTION

Digital-first onboarding journey starting in customer's chosen channel. Captures identity through eKYC and document verification. Real-time risk and AML scoring via existing KYC vendor. Branch and contact-centre journeys retained as fallback.

Five-step flow:

Each step automated. Manual review triggered only on exception.

Integrations:

eKYC vendor | Core banking | CRM

Direction confirmed by Mark Johnson and Sarah Lee in workshop, 18 May 2026.

Options under consideration:

- Build in-house
- Buy COTS solution
- **Partner / SaaS (preferred)**
  Best balance of speed, value, risk — see Options Analysis.
- Do nothing (rejected)

4 MEASURES OF SUCCESS

SIX MEASURES

1. Time to account activation
4–7 days → under 10 min for 80%
3 months · Head of Retail · Leading

2. Application drop-off rate
40% → under 8%
3 months · Customer Ops · Leading

3. Branch data-entry time share
35% → under 10%
6 months · Head of Retail · Leading

4. Cost per account opened
$84 → under $58 (–30%)
12 months · Head of Finance · Lagging

5. Net new accounts per month
Today's run-rate · +40% target
12 months · Head of Retail · Lagging

6. Compliance review SLA
200–300 backlog → 95% within 30 min
3 months · Head of Risk · Leading

Estimated annual value
$2.4M cost savings + revenue
Investment: $1.2–1.5M build · 12 mth ROI payback · 18–24 mth full benefit

Tracking
Monthly review by Customer Operations Director from Month 1.

Quarterly executive review with Sponsor through Year 2.

Year 1 Benefits Realisation Plan attached as supporting document.

VERSION

v1.0 · 20 May 2026
Next review: end of As-Is/To-Be analysis · target ~15 June 2026

AS-IS — OPERATIONAL REALITY TODAY

SECTION 1

Current Process Flow

End-to-end flow from trigger event to outcome. Each major step in sequence.
Roles, systems, handoffs, decision branches all explicit.

Built by walking the work with the people who do it. Not by reading process documentation.

Documentation describes the official process; the As-Is must describe the actual one.

Format: Single diagram + 1–2 page narrative + named operators who validated

SECTION 2

Pain Points & Workarounds

For each step:

- **Delays** — where does work wait?
- **Errors** — where do mistakes happen?
- **Data breakdowns** — what fails to flow?
- **Workarounds** — what informal practices?

Workarounds reveal where the official process is failing.

SECTION 3

Systems & Data Flow Map

For each system:

- What it does, who owns it
- Data passed in / out, format, cadence
- Manual rekeying or transformations
- Known issues per flow

Most process pain has a data dimension.

QUANTIFICATION

Quantify pain points where data permits

"Slow" is weak. "Average 3-day wait, 30% of cases" is actionable.
Tie each pain point to a specific step in the flow.
Connect pain points back to the Problem Statement in the Project Vision.

Output: Pain Points Inventory with step, type, description, quantification, why it exists

Confirmed by named operators who do the work.

TO-BE — DESIGN OF HOW IT WILL WORK

SECTION 4

To-Be Process & System Design

Future process flow + system flow. Two layers, must be consistent.

Must:

- Address every pain point from Section 2 — resolved or accepted
- Eliminate or formalise every workaround
- Map cleanly to Desired Outcome in Project Vision

Test: stakeholder sees As-Is and To-Be side by side and clearly sees the improvement.

SECTION 5

Pain Point Resolution

For each pain from Section 2:

- **Fully resolved** — gone in To-Be
- **Partially mitigated** — reduced
- **Accepted** — known limitation

Honesty matters. Don't claim resolution that won't materialise.

SECTION 6

Capability & Role Changes

Per role:

- **New** — did not exist before
- **Changed** — work content shifts
- **Reduced** — volume decreases
- **Eliminated** — no longer needed

Surface contentious findings here, not after delivery.

SIGN-OFF

Project Vision referenced: Version __, dated __

A To-Be that does not connect to a verified As-Is is a future state designed in a vacuum.
Without sign-off here, delivery design proceeds at risk.

AS-IS — TODAY (BASELINE FY26 Q1)

CURRENT PROCESS FLOW

Confirmed by 2 Tier 1 officers, 1 Tier 2 officer, the Medical Reviewer team lead, March 2026.

PAIN POINTS

P1. Tier 2 precedent lookup
No system view of past decisions; officers maintain personal spreadsheets.
~30 min/case · 200+ cases/officer/month

P2. Information requests
35% of Tier 2 cases re-loop to patients; average 9-day delay added.

P3. Mailroom indexing accuracy
Manual indexing — 4% mis-routed

SYSTEMS & DATA

Claims Platform (legacy 1998)
No precedent lookup · no API for analytics

Document Management
Indexed manually · OCR confidence not used

Member Portal
Status update only after Tier 1 decision — 3-day visibility gap drives 12% support calls

Most pain has a data dimension.

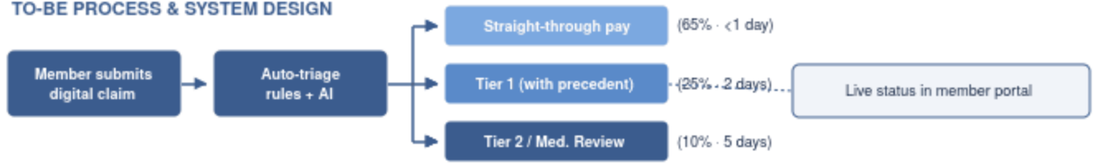

QUANTIFIED BASELINE

Mean claim cycle:	**8.5 days**	(SLA: 5 days · met on 41% of claims)
Tier 2 escalation rate:	**43%**	(industry benchmark: 25–30%)
Member satisfaction:	**62%**	(industry benchmark: 78%)
Annual cost of process:	**$8.4M**	(staff $6.1M, systems $1.4M, error rework $0.9M)

Pain points P1–P3 are tied to Problem Statement in Project Vision HC-2026-042.

TO-BE — TARGET (FY27 Q4)

TO-BE PROCESS & SYSTEM DESIGN

Validated against Project Vision Desired Outcome — meets all six measures.

PAIN POINT RESOLUTION

P1. Precedent lookup — RESOLVED
AI-augmented precedent surfaced inline

P2. Information requests — RESOLVED
Required documents requested upfront

P3. Mailroom indexing — PARTIALLY
Digital-first; paper path retained for 5% of members; OCR confidence flag added

All 3 pain points addressed.

ROLE CHANGES

Tier 1 Claims Officer — REDUCED
~40% headcount reduction over 18 months via natural attrition; remaining work shifts toward exception handling.

Triage Operations Analyst — NEW
2 FTE — monitor AI accuracy, tune rules

Tier 2 / Medical Review — CHANGED
Higher proportion of complex cases

SIGN-OFF
